

Become environment - conscious

By using **Thermol - P**, you will be doing a great service to the environment. As **Thermol - P** helps in complete burning of petrol it can dramatically reduce harmful emissions of carbon monoxide, hydrocarbons, and nitrogen oxides. Soot and black smoke. In other words, regular use of **Thermol - P** means you have your PUC - Pollution Under Check.

Big benefits in a small dose

The recommended dosage for **Thermol - P** is one ml for every two litres of petrol. To begin with, we recommend a dosage of one ml for each one litre of petrol for the first 500 km of usage, to ensure complete removal of deposits from entire fuel system, and restore optimum performance. While using it for the first time, add sufficient quantity of **Thermol - P** to be able to treat the balance quantity of petrol in the tank and the fresh quantity that is filled.

Economical and friendly packaging

Thermol - P comes in user-friendly packing fitted with cap measuring device. Just fill the cap to measure the required quantity of product to mix with petrol, while it is being filled into the tank. Depending upon the quantity filled, you can easily measure the required amount of **Thermol - P**.

*Start using **Thermol - P** in your engine... Listen to the gentle purring*

Thermol - P - The true benefits of complete combustion

- Thermol - P** improves combustion efficiency by promoting the fuel to burn completely
- Thermol - P** gives longer engine life
- Thermol - P** preserves the design potential of the engine
- Thermol - P** promotes smoother engine operation and reliability
- Thermol - P** saves maintenance cost
- Thermol - P** reduce emission
- Thermol - P** gives better fuel economy

Do write to us about your vehicle and your experience with **Thermol - P**. Your questions and comments are most welcome.

ABHITECH ENERGYCON LIMITED

A-1020, Oberoi Gardens Estates, Chandivall Farms Road, Mumbai - 400 072. (INDIA)

INTRODUCING

THERMOL - P
revolutionary performance - booster

FOR PETROL

Get the benefits of complete
burning of fuel in your engine
Gives you speed and power

ABHITECH

A product of

ABHITECH ENERGYCON LTD.

THERMOL - P[®] - The complete combustion promise

Get the benefits of complete combustion of the fuel inside your engine

Don't you sometimes wish that your vehicle purred as it did when you took your first ride in that shiny new piece of machinery? Do you know that this is more than just possible? That you can get the same mileage as the day you brought it from the showroom?

Well, thus far, it might have been just "wishful thinking" or an "impossible dream" But now with **Thermol - P** technology, it isn't a far-fetched idea. It is now possible to keep your vehicle in top working condition.

What is Thermol - P?

As we all know, the crucial factor in optimum performance of a petrol engine is the complete combustion of fuel and the cleanliness of the entire fuel system, including the combustion chamber.

The driving conditions and the quality of fuel that the engine runs on, can lead to incomplete burning of the fuel inside the engine resulting in carbon or polymer-like harmful deposits on the carburetors or fuel injectors, intake valves, and even inside the combustion chambers.

Thermol - P is a unique additive technology, which helps in complete combustion and also cleans up the entire fuel systems, right from your Petrol tank, to the combustion chamber.

Thermol - P-The promise of complete combustion

Combustion is the process in which the fuel is burnt with air, inside the engine. This burning of fuel converts it into energy, which is used to run the engine. Fuels like petrol are compounds comprised of carbon and hydrogen. In the engine these get burnt in the presence of oxygen to release energy, carbon dioxide (CO₂), and water vapour.

Incomplete combustion is harmful

If the combustion is not complete, then the carbon in the fuel does not get burnt completely. This results in unburnt fuel and carbon particles coming out of the exhaust. City driving conditions coupled with these problems associated with incomplete burning of fuel, lead to drivability problems such as **loss of speed, loss of vital power, rough idling, poor engine response, stalling, or in some cases, even knocking**

The result- **fuel economy goes down, emissions go up.**

Until now, all you could do was to get the engine cleaned up at the services station to bring it to its original performance.

With **Thermol - P**, you can avoid this time-consuming, costly procedure altogether.

Start your engine on Thermol - P technology

Thermol - P is a revolutionary performance-booster like no other additive. It assists the process of complete burning of petrol and cleaning-up of the deposits formed in the entire fuel system like carburetor, injectors, intake manifold, intake valves, and combustion chamber.

With **Thermol - P**, the petrol burns completely inside the engine, no matter what quality of petrol your engine is running on.

Just add **Thermol - P** to the fuel tank and get **more power, more speed, and leave behind less pollution.**

The Thermol - P technology

Thermol - P is a product of Abhtech Energycon Limited, developed at our country's prestigious **IIT Institute of Technology (IIT), Mumbai.**

Thermol - P contains a unique, clean-burning, additive system, with several carefully balanced components.

Abhtech is continuously working with IIT, Mumbai to bring out revolutionary products to solve fuel-related problems, and to improve the environment we live in.

Thermol - P not only helps in complete combustion, but also keeps the engine free of all kinds of deposit build-up. It actually removes even the existing deposits.

Thermol - P is a petrol performance-booster which keeps the entire fuel systems in top working condition.

A product of

In association with **I.I.T. Mumbai**

No mechanical tune-up

Thermol - P's Unique additive technology helps in complete combustion and also cleans up parts of your engine, which would normally require a mechanic to dismantle them. By simply adding **Thermol - P** to the fuel tank, you eliminate the need for a mechanical clean-up, of the fuel system.

Dirty

Clean

Thermol - P provides a solution for complete fuel system clean-up, which also keeps the engine in top working condition, thus providing you with **continuous tune-up everytime you drive!**

Optimum fuel economy

Clean-burning petrol ensure efficient operation and optimum fuel economy. Clogged fuel injectors or carburetors can dramatically reduce the fuel economy.

Thermol - P gives you optimum fuel economy, and also helps in restoring fuel economy by removing deposits. In new engines, it helps in preserving the design potential of the engine by preventing deposit build-up.

Thermol - P saves on maintenance costs as it takes care of the entire fuel system. The needs for costly fuel injector/carburetor overhauls and expensive valve grinding is reduced.

The suggested usage rate of **Thermol - P** is very low compared to other competitive products, giving you **more efficiency from every rupee you spend on fuel!**

Guaranteed results

Allowing the fuel to burn completely and removing the fuel system deposits, gives efficient and more reliable engine operation. Fuel injected engines in particular, are more likely to rough running caused by incomplete burning of fuel as the unburnt carbon gets deposited on the fuel injectors thereby obstructing proper atomisation. **Thermol - P** helps in keeping fuel injectors clean for optimum and smooth engine operation. **Thermol - P** also works effectively on cars fitted with carburetors.

• **Thermol - P** is approved by PCRA
